

Anurag Dharmik

Full-Stack Developer

React • Supabase • PostgreSQL • AI-Powered Productivity Systems

Nagpur, India 440024

+918073699672

anuragdharmik07@gmail.com

GitHub: github.com Portfolio : [portfolio](#)

Professional Summary

Full-stack developer focused on building AI-powered productivity and workflow systems using React, Supabase, and PostgreSQL. Experienced in designing responsive web applications with authentication, analytics dashboards, and secure multi-user architecture. Passionate about building scalable products and solving real-world workflow problems.

Technical Skills

Languages: Python, JavaScript, C

Web Development: React, HTML5, CSS3, Node.js, Express.js, REST APIs

Tools: Git, GitHub, VS Code, Vercel, Render

Concepts: Authentication Systems, Responsive Design, Data Structures & Algorithms, Component-Based Architecture, Object-Oriented Programming, Asynchronous Programming

Projects

FounderOS | *React, Supabase, PostgreSQL, Gemini API, Vercel, Resend*

GitHub: github.com/anudharmik

Live: <https://founder-dashboard-five.vercel.app/>

- Built an AI-powered full-stack productivity platform for tracking goals, tasks, and execution workflows
- Integrated AI-powered productivity insights and focus recommendations using Gemini API
- Designed secure multi-user architecture using Supabase authentication and Row Level Security
- Implemented secure authentication and protected user workflows using Supabase Auth
- Developed analytics dashboards with productivity scoring, task completion tracking, and weekly progress visualization
- Integrated email notifications and reminders using Resend
- Designed responsive dashboard UI with reusable React component architecture
- Deployed and managed production application using Vercel and Render

Job Application Tracker | *React, Supabase, JavaScript, Vercel*

GitHub: github.com/anudharmik

Live: <https://job-application-tracker-seven-psi.vercel.app>

- Built a full-stack job tracking platform with authentication, persistent storage, and application workflow management
 - Implemented protected routes and secure authentication using Supabase Auth
 - Designed responsive UI for tracking application status, deadlines, and progress
 - Integrated PostgreSQL database with real-time CRUD operations
-

Technical Highlights

- Built and deployed an AI-powered full-stack productivity platform using React, Supabase, PostgreSQL, and modern cloud deployment workflows
- Implemented secure multi-user architecture with Supabase Authentication and Row Level Security (RLS) for protected user-specific data access
- Implemented a structured prompt-engineering system to extract only high-value user data, drastically enhancing the relevance of AI-driven insights
- Designed responsive analytics dashboards with productivity scoring, task tracking, and progress visualization systems
- Developed reusable component-based frontend architecture for scalable dashboard feature expansion
- Integrated automated email notifications and reminders using Resend for deadline and workflow management

Measurable Impact

- Built a centralized productivity system capable of managing goals, tasks, workflows, and analytics within a single dashboard experience
- Reduced manual productivity tracking effort by automating weekly insights, progress analysis, and focus recommendations using AI-generated summaries
- Improved application scalability and maintainability through modular React component architecture and relational PostgreSQL schema design
- Enhanced user data security and isolation using Row Level Security (RLS) policies and authenticated multi-user workflows
- Optimized user experience with responsive dashboard layouts, reusable UI systems, and real-time workflow interactions

Education

Ramdeobaba University — Nagpur, India

B.Tech in Computer Science and Engineering (Specialization in Artificial Intelligence and Data Science)
(Expected May 2028)

CGPA: 8.51
